

GMH FINISH STANDARDS

REV 2 – October 12th 2020

FACILITIES DEVELOPMENT
THOMAS LEMIEUX
GRADY HEALTH SYSTEM – ATLANTA, GA

The intent of this packet is to define a standard finish, application, and placement of finishes for the entire Grady Health System portfolio. The Facilities Development design standards were authored to inform design professionals and contractors of an interior finish level and/or criteria to be used in the design and construction for all ongoing and new and renovation projects.

These standards outline the criteria that will be incorporated into the design documents and finish schedules for all projects. There shall be no proposed deviations from these standards. Exceptions must be reviewed and approved on a per project basis with the specific project manager and the Director, Facilities Development.

NOTES:

- ⊙ DENOTES MULTIPLE FINISH OPTIONS
- ⦿ DENOTES PREFERRED FINISH OPTION

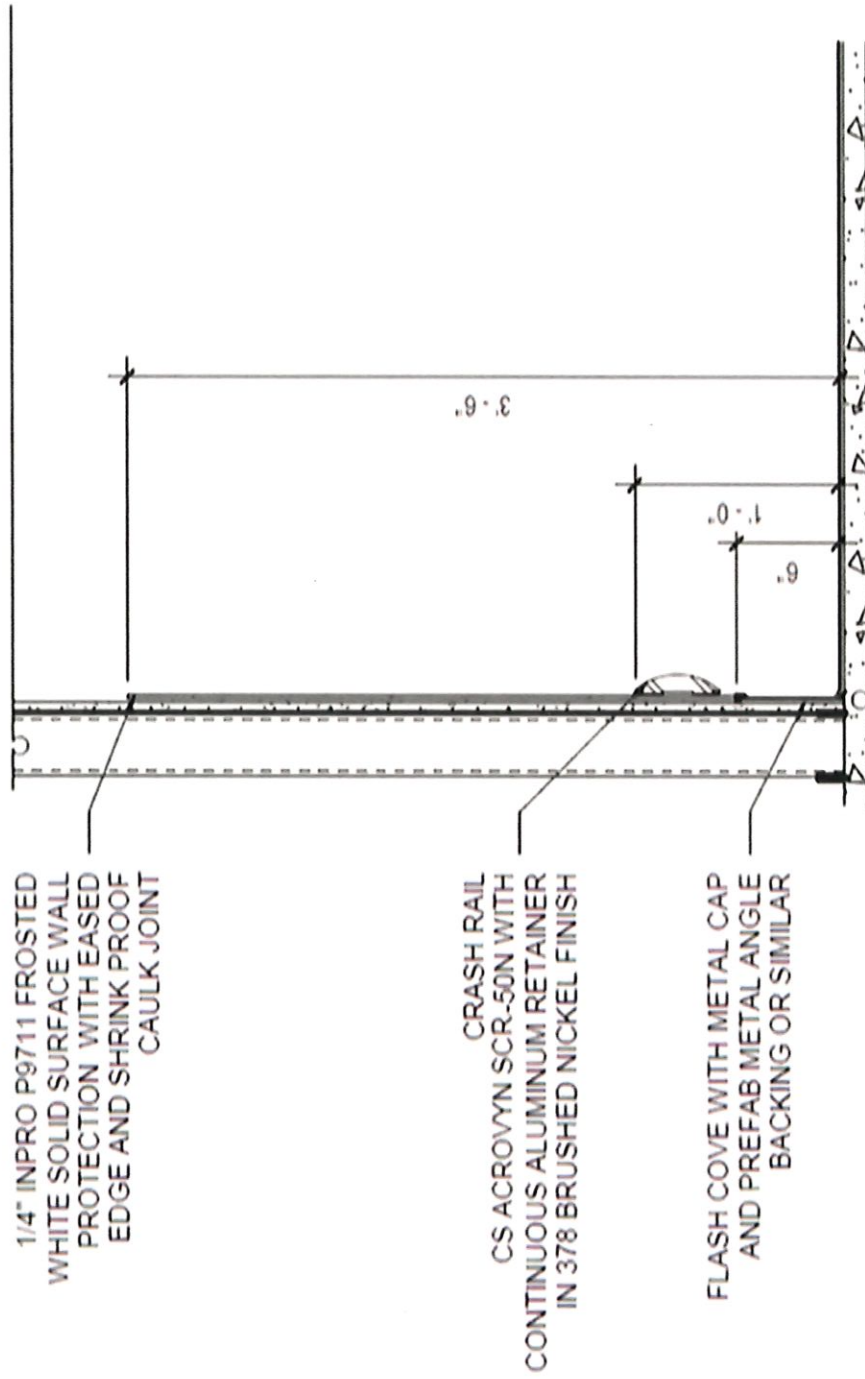

WALLS AND CEILINGS (CONTINUED)

WALL PROTECTION – COMMON CORRIDORS

The GMH standard will allow only one common corridor wall protection moving forward. In these wall conditions ¼" solid surface shall be used to protect the walls from impact, marking, and staining. Interlocking S curve edges are expected between panels so the finished product stays flush to the wall at all joints and does not become a cleanliness issue. The top edge should be factory smoothed so as not have an exposed sharp edge at the top of the panel.

TYPE 1

TYPE 2

WALLS AND CEILINGS (CONTINUED)

PAINT COLORS

The GMH standard will allow only PRESELECTED paint colors moving forward.

The GMH standard has been established using Sherwin Williams colors. Any use of other manufacturer colors should be approved prior to use and matched to the SW color swatch, not field color match.

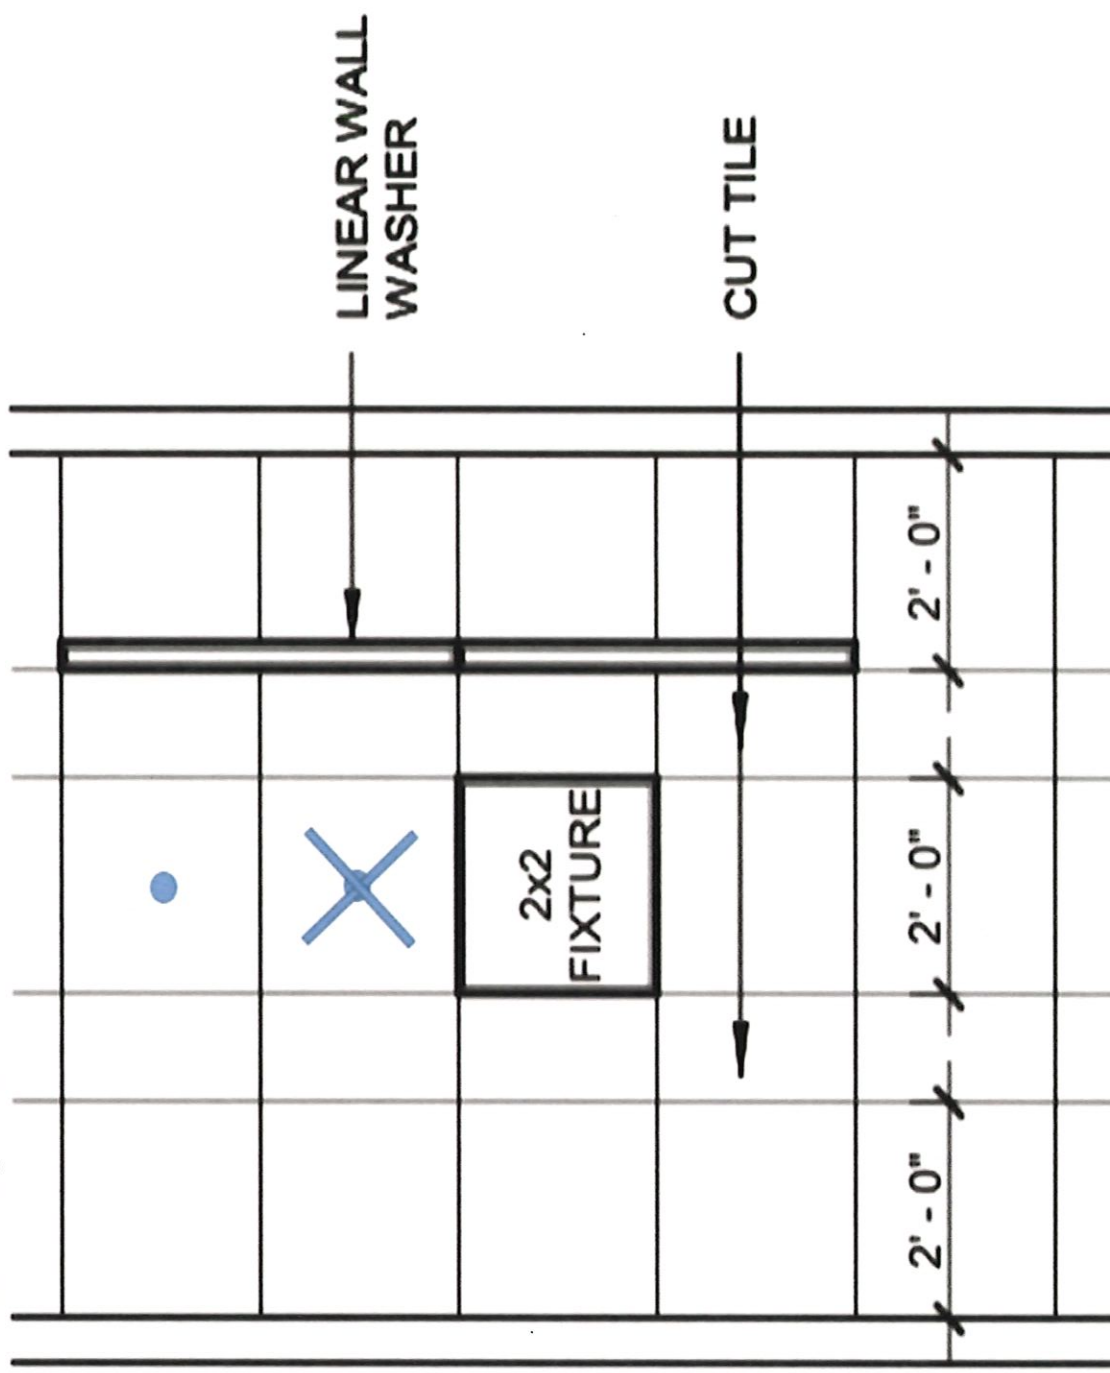

PAINT TYPE AND PLACEMENT

EPOXY	<ul style="list-style-type: none"> • PATIENT TOILET ROOM WALLS • STAFF TOILET ROOM WALLS • SOILED UTILITY ROOM WALLS • COMMON ARE TOILET ROOM WALLS • AIRBORNE ISOLATION ROOM WALLS AND CEILINGS

ACRYLIC LOW ODOR SEMI-GLOSS WALL PAINT	<ul style="list-style-type: none"> • DOOR FRAMES

- For paint specifications, See GMH Finish Standards

CEILING SYSTEMS

- The GMH standard will define ceiling products and systems.
- All corridor ceilings shall be constructed with a centered tile with full tile at the edges as depicted below.
- All ceiling mounted systems shall be placed in the center of the tile, in the center tile.
- Fire sprinkler shall be placed with flexible hose/head system. The concealed head shall be secured with a platen connection to the grid. Bar connections are not allowed.

RUBBER FLOORING INSTALL DETAIL

The standard recommended installation details for the rubber tile/sheet flooring:

Continue to use CW joints along the open floor area and other joint decisions as they have all worked out well.

- Use **Heat Weld HW** at the vertical joints for Rubber tile/sheet where the flooring has an integral cove.
 - The cold welds were regularly damaged on other installs and over time we are concerned that product will misalign at the joint
- Use **Heat Weld HW** at the doorways and doorways leading to toilets
 - The cold welds were regularly damaged on other installs and creates a residue on the floor.
- Duraflex installer to use a **thin plastic strip** to use as a guard – to be removed after installation
 - Where duraflex meets NORA tile/sheet a plastic strip will perfect that edge.
 - Use Heat Weld HW at those same doorways as well.

Heat weld the integral cove base

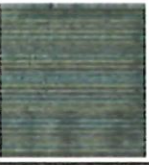

- 1-Where Du-ra-flex meets Rubber tile/sheet
Du-ra-flex to use a plastic strip to perfect that edge.
Remove plastic strip after installation
- 2-Heat weld the Rubber flooring at the toilet doorway.

CASEWORK AND DOORS

CASEWORK

The GMH standard will allow only PRESELECTED laminates and solid surface products to be used on cased goods moving forward.

- For solid surface and laminate specifications, See GMH Finish Standards

NURSE STATION

The GMH standard will use a consistent nurse station build out in all areas. The nurse station wall will continue from the wall edge and have a transaction counter and ADA transaction counter across the full length. Work surfaces will be counter top at the ADA transaction counter, then “sit” / “stand” desks across the remainder of the nurse station. A waterfall edge will be fall from the transaction counter down to the floor.

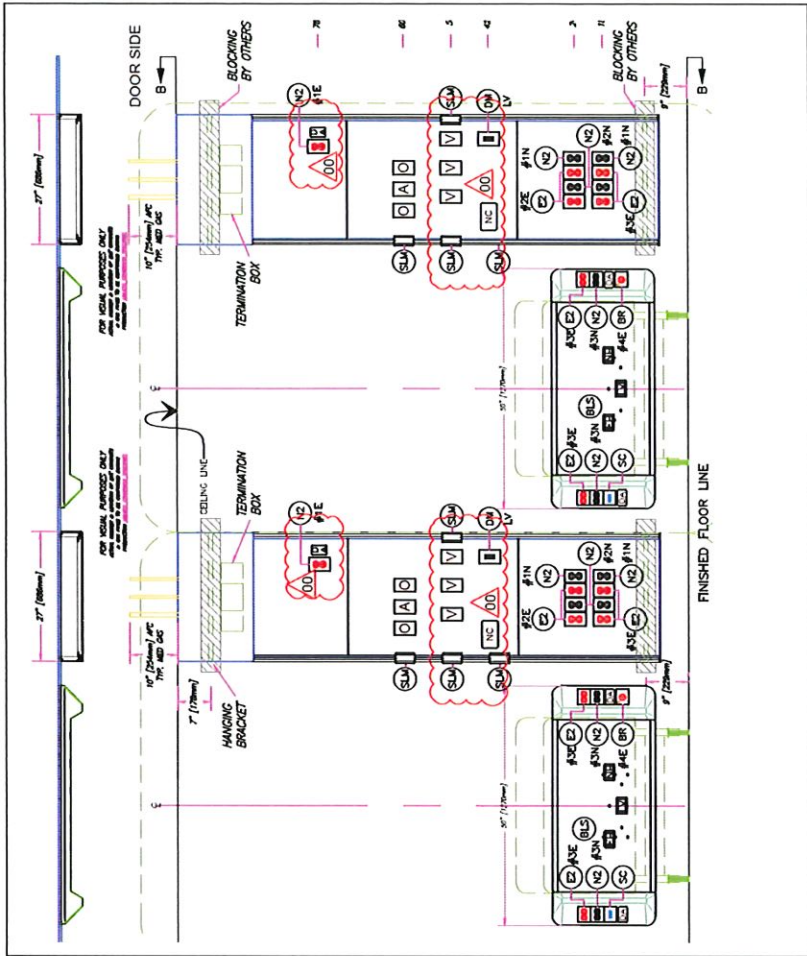

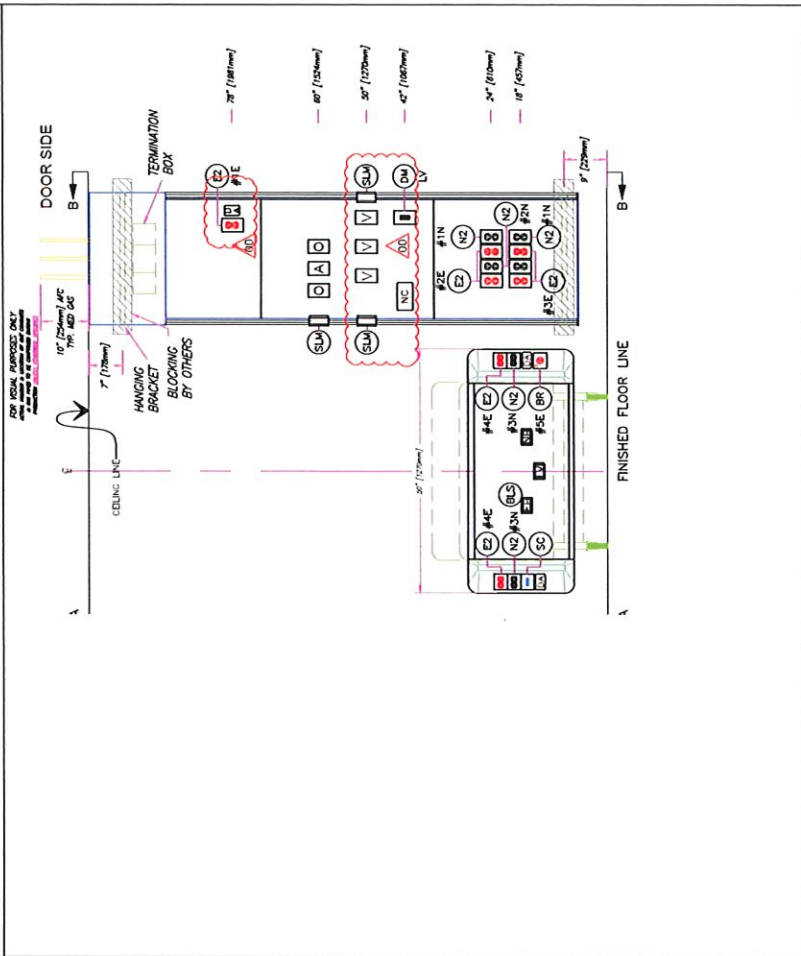

- For solid surface and laminate specifications, See GMH Finish Standards

CASEWORK AND DOORS (CONTINUED)

PATIENT HEADWALL

The GMH standard will allow only headwalls as defined by the building standard and only GMH finished applied to those headwalls. There are four headwall types used in GMH spaces and those types are the only headwalls allowed without prior approval.
